RECOMMENDED INSTALLATION INSTRUCTIONS

1. Always inspect the floor prior to installation to ensure it's clean and free of debris. **Inspect and test for moisture before installing.** Reference the CRI Carpet Installation Standard.
2. When laying cushion over subfloor where old glue is exposed, first sprinkle talcum, baby powder, or baking soda. This will help prevent the cushion from partially sticking to the floor, potentially causing noise.
3. If using a pad adhesive, apply a small amount in the corners of the room to help hold the cushion in place during installation. Staples may also be used around the perimeter of the room.
4. Use a flexible, moisture-resistant-type tape (no masking or other paper-based tape) at cushion seams and for covering tears, punctures, and staples.
